RE: 9th Street and Main Street Intersection Improvements

To BOW members:

The attached quote proposals are being submitted to the Board of Works and Safety for the next regularly scheduled meeting on December 22, 2022, for approval to proceed with purchase and installation.

Based on recommendations from NIRCC (Northeastern Indiana Regional Coordinating Council), we are proposing traffic signalization upgrades for the intersection of 9th Street and Main Street.

These upgrades include removal of 4 existing traffic signal posts and heads, to be replaced with new 4 way flasher heads mounted on 2 decorative black signal posts with mast arms located at Northwest and Southeast corners, locating the flashers over the center of the intersection. New 36" retroreflective stop signs will be mounted on black posts in each direction. New concrete foundations and flasher cabinet, along with all new underground conduit and wiring will ensure future reliability of the flashers.

Funding for this project was approved by Auburn Redevelopment Commission at their December 6, 2022 meeting, at a not to exceed cost of \$50,000.

Please contact me with any questions you might have, thank you.

Sincerely,

Daryl K. McConnell, Director of Engineering
Municipal City of Auburn
